

You will cut EACH of these 8 maps out (for a total of 16) and glue each one to the BACK of an index card (the blank side with NO lines). After looking up EACH of the following physical features, you will mark WHERE each are located on individual cards. "Mark" the location with a solid bubble (●) or star (★) to show WHERE it is located on the map. Turn the index card over and neatly write on the top line what physical feature it is. We will add descriptions later, so do not write on the lines below.
